

Micah Murray

Senior Full-Stack Developer & Application Architect — PHP, Laravel, Node.js, TypeScript, React

Longmeadow, MA | 860.205.0687 | micah.murray@gmail.com | [linkedin.com/in/micahmurray](https://www.linkedin.com/in/micahmurray) | github.com/micah1701

Summary

Senior Full-Stack Developer and Application Architect with 23+ years of professional experience designing, building, and scaling web applications and APIs across manufacturing, enterprise IT, sales, marketing, and business operations. Deep expertise in PHP and Laravel, with strong hands-on experience in Node.js, TypeScript, React, and cloud-integrated (AWS, Azure) full-stack development. Proven track record architecting secure, cross-system integrations, modernizing legacy platforms, and automating manual workflows to improve data integrity and operational efficiency.

Recognized for pairing deep technical expertise with a pragmatic, big-picture mindset — delivering solutions that reduce manual processes, close functionality gaps, and scale with the business. Experienced mentor and technical resource for development teams, with a track record of translating business requirements into maintainable, production-grade software.

Skills

Broad technical proficiency across full-stack development, cloud infrastructure, API integration, and data-driven application design.

Languages & Core Stack: PHP, JavaScript (ES6+), TypeScript, Node.js, SQL (MySQL, MS SQL Server, PostgreSQL), Java

Frameworks & Libraries: Laravel, Next.js, React, SvelteKit, Spring, Tailwind CSS, Bootstrap

Cloud & Infrastructure: AWS (EC2, IAM, S3), Azure, DigitalOcean, Docker, Cloudflare, REST APIs, IIS, Apache, Nginx

AI & Automation: OpenAI / LLM API integration, agentic and AI-assisted development workflows (Cursor, Claude Code, Copilot), ETL pipeline development, workflow automation with Node.js (n8n)

Data & Systems Integration: ERP & CRM integration (Sage X3, Salesforce), REST API design, secure document APIs, cross-system data exchange, workflow digitization

Development Practices: Agile & Scrum, Git, CI/CD, code review, unit/integration testing, mentoring & technical leadership, UI/UX accessibility & performance optimization

Experience

SCA Pharma, Windsor CT (Remote) — Full Stack Developer | September 2019 – January 2026

Senior member of a core development team responsible for evolving and maintaining critical manufacturing and enterprise systems built on a Java/Spring backend with MS SQL, MySQL, and Sage X3 ERP integration. Delivered production-grade features in the core legacy stack while independently designing and building lightweight PHP and Node.js applications, REST APIs, and TypeScript-based tooling to close functionality gaps, automate data collection, and modernize manual processes — all within a heavily regulated environment governed by cGMP, FDA, and DEA compliance standards.

- Architected and built a secure REST API integration layer enabling controlled cross-system data access between MasterControl, Salesforce, and internal ERP systems, while maintaining strict regulatory compliance controls.
- Designed and developed a document printing microservice generating traceable unique identifiers for printed records, improving document accountability and FDA/DEA audit readiness.
- Built full-stack, PHP and Node.js-powered web interfaces that replaced handwritten production data logs — significantly improving data accuracy, accessibility, and workflow efficiency for line operators.
- Developed ETL pipelines and data automation tooling to feed real-time manufacturing dashboards and intranet applications supporting production, quality, and sales operations.
- Served as a technical resource and mentor within a four-developer core team, advocating for clean architecture, API-first design, and maintainable, testable code.

Technologies: Java, Spring, PHP, Node.js, TypeScript, JavaScript, MS SQL, MySQL, REST APIs, Sage X3 ERP, ETL, HTML/CSS

Primacy, Farmington CT — Senior Technology Developer | *June 2018 – August 2019*

Full-stack developer within a digital agency serving multiple enterprise clients, translating complex visual designs into stable, scalable, production-grade web applications while contributing to internal tooling and engineering standards.

- Developed and maintained responsive, full-stack Drupal-based web applications for enterprise clients, ensuring design fidelity, accessibility compliance, and cross-browser performance across deliverables.
- Built and supported internal web tools using TypeScript and modern JavaScript frameworks to streamline internal production and content workflows.
- Collaborated with multidisciplinary engineering and design teams to establish reusable, modular codebase standards and improve overall development practices.

Technologies: *Drupal, PHP, TypeScript, JavaScript, HTML/CSS*

Cronin, Glastonbury CT — Senior Full Stack Developer | *June 2014 – April 2018*

Lead developer on enterprise and digital marketing web initiatives, serving as both primary technical owner and primary client contact — balancing hands-on full-stack development with direct collaboration across design, IT, and account management teams.

- Led full-stack development of a regional bank's complete website overhaul, serving as lead developer and primary point of contact with client IT staff and project managers to deliver a secure, scalable Sitefinity (.NET/C#) platform.
- Architected and built dozens of responsive, PHP-driven landing pages and microsites for high-traffic lead-generation marketing campaigns, applying modern front-end performance and accessibility standards.
- Partnered directly with design and UX teams to implement complex, accessible layouts, translating business and marketing goals into technical requirements and maintainable code.
- Served as a go-to technical mentor and troubleshooting resource for teammates, resolving integration and deployment challenges across projects.

Technologies: *PHP, Sitefinity (.NET/C#), JavaScript, HTML/CSS, MySQL, REST APIs*

The Pita Group, Rocky Hill CT — Senior Interactive Developer | *April 2010 – June 2014*

Full-stack developer and technical innovation lead within a small, highly creative digital agency team, owning projects end-to-end from concept and prototyping through development and launch for a range of agency clients.

- Designed and built custom, full-stack PHP web applications and interactive experiences tailored to individual client workflows and marketing objectives.
- Served as internal innovation lead, prototyping new technical concepts and interactive features that were productized into recurring agency service offerings.
- Acted as the primary technical bridge between creative, client, and engineering perspectives, translating design vision into scalable, maintainable code under tight project timelines.
- Drove process and code-reuse improvements that accelerated delivery speed and improved consistency across concurrent client projects.

Technologies: *PHP, MySQL, JavaScript, HTML/CSS, jQuery, REST APIs, Adobe Creative Suite*

Additional Early Experience

ARRL, Newington CT — Web Application Developer | *January 2007 – April 2010* — Built a full-stack online membership enrollment/renewal application used by 161,000 members, a data-processing system integrating with the FCC's Universal Licensing System, and a self-publishing tool for editorial staff. (PHP, MySQL, JavaScript, REST/data integration)

Hilb, Rogal & Hobbs, Hartford CT — Web Developer | *March 2003 – December 2006* — Began professional software development career building ColdFusion and Flash-based sales reporting tools against a MySQL database for a national sales team, supporting a home-built SFA platform predating widely-available CRM tools. (ColdFusion, Flash, MySQL, HTML)
